

GrowTH user manual

For parents and guardians, with short sections for caretakers and doctors at the end. GrowTH is at **<https://studio5-beta.vercel.app>**. It works on a phone, a tablet or a computer, in any modern browser.

GrowTH helps you follow your child's growth and development and know when to ask a doctor. It is a **screening aid, not a diagnosis**. If anything worries you, talk to your child's doctor.

-

1. Create your account

You can sign up in two ways.

With your email address

1. Open GrowTH and choose **Create an account**.
2. Choose **Parent or caretaker**.
3. Enter your full name, email address, phone number and a password (at least 8 characters, with a letter and a number).
4. Tick the box to accept the terms of use and privacy notice, and choose **Create Account**.
5. We email you a link. Open it to **confirm your email address**. Until you do, a yellow banner at the top of GrowTH reminds you, with a button to send the link again.

With Google

1. Choose **Sign up with Google** (or **Continue with Google** on the log-in page) and pick your Google account.
2. GrowTH fills in your name and email from Google. Choose **Parent or caretaker**, add your phone number, accept the terms, and choose **Create my account**. Your email is already confirmed, because Google has checked it.

Both ways, one account. If you signed up with a password and later use **Continue with Google** on the same email address, GrowTH asks whether to link them. After linking, either

way signs you into the same account, with the same children. If you signed up with Google, you can add a password in **Settings** (see [section 9](#)).

Forgot your password? On the log-in page choose **Forgot password?**, enter your email, and follow the link we send (it works once, for one hour).

2. Add your child

After your first sign-in, choose **Add your own child**.

1. **Avatar.** Every child gets a drawn character instead of a photo, for their privacy. Pick the skin tone, hairstyle and hair colour (and clothes for babies). Babies and toddlers up to 3 years get a baby drawing; it changes to the young-child drawing as your child grows.
2. **Full name**, and a **nickname** if you like (the charts use it).
3. **Date of birth.**
4. **Sex: Girl or Boy.** This matters: growth charts and bone age are different for girls and boys, so it decides which reference GrowTH compares your child with.
5. **Hospital number (HN)**, if you know it. It helps your child's doctor find them. It is optional and can be added later.
6. **You are this child's:** mother or father, legal guardian, or a relative raising the child (for example a grandparent).

The person who adds a child **manages that child's profile**. You can edit it, invite or remove a caretaker and the child's doctor, and delete the profile. Caretakers and the doctor join only when you invite them, and can do less (see [section 6](#)).

To change any of this later, choose the green pencil on your child's card. It opens a window over the page you are on. Only you and the child's doctor see the pencil; the doctor can change only the hospital number. Your answer to "You are this child's" shows on its own there; choose **Change** to pick a different one.

More than one child? Add each one the same way. Switch between them with the **switch** button (two arrows) on the child's card; every page then shows the child you picked.

3. Your dashboard

The dashboard shows the selected child at a glance:

- **The child's card** at the top, with three buttons: **switch** child (two arrows), **people** who follow this child and invitations (two figures), and **edit** (green pencil).
- **Height, weight and BMI** from the latest measurement, each with a plain label such as *Within the usual range*. Choose one to see its chart below.
- **Puberty screening**: start a questionnaire, or see the latest result.
- **AI bone age**: the doctor's latest reading, when there is one.
- **Parenting resources**: short articles about growth, nutrition, puberty and bone age.

The menu at the top (at the bottom on a phone) goes to **Dashboard, Growth, Puberty, AI Prediction, Resources** and **Contact**.

4. Record growth and read the charts

Go to **Growth**.

Add a measurement. Enter the height (cm) and/or weight (kg) and the date it was measured, then choose **Add measurement**. For children under 3 you can also record head size. GrowTH immediately tells you, in plain words, how the measurement compares with other children.

Height (cm)

Weight (kg)

10/02/2026

Add measurement

This measurement is within the typical range for the child's age and sex.

Height: within the usual range (66th percentile, SDS 0.4) · Weight: within the usual range (59th percentile, SDS 0.22) · BMI 16.82 · Healthy weight

Height

The green band is the usual range: 94 of every 100 girls this age fall inside it. The dotted line is the average. Ploy's measurements are the solid line.

Read the chart.

Height

The green band is the usual range: 94 of every 100 girls this age fall inside it. The dotted line is the average. Ploy's measurements are the solid line.

— Ploy — Usual range for girls this age — Average — Shorter than usual — Taller than usual

Reference: CDC 2000 growth charts (usual range = 3rd to 97th percentile).

- The **solid line with dots** is your child's own measurements.
- The **green band** is the *usual range*: 94 out of every 100 children of the same age and sex are inside it.
- The **dotted line** is the *average*.
- The **blue area** below the band means *shorter* (or lighter) *than usual*; the **orange area** above means *taller* (or heavier) *than usual*.
- **Point at a dot** to see that measurement in words, for example "At 9 years 4 months: 137.0 cm, within the usual range. Usual for girls this age: 123.2 to 147.3 cm. Average: 134.8 cm."

What matters most is the **shape of the line over time**. A child who stays at a similar place in the band is growing steadily, even if that place is near the top or the bottom. A line that crosses into a different area, or flattens, is worth mentioning to your doctor.

BMI (body mass index) is shown from 2 years of age, in the colours doctors use: underweight, healthy weight, overweight, obesity.

The reference is the CDC 2000 growth charts. The exact figures (percentile and SDS) are in the history list: point at a *Usual / Low / High* label to see them.

History. Every measurement is listed under the charts. Use the **pencil** to correct one and the **bin** to delete one.

5. Puberty screening

Go to **Puberty**. The questionnaire asks about everyday changes you might have noticed (growing faster, outgrowing shoes, body odour, skin, and the body changes of puberty), with questions for girls or boys. Answer **Yes**, **No** or **Not sure**.

The screenshot shows the GrowTH app interface. At the top is a navigation bar with the GrowTH logo and tabs for Dashboard, Growth, Puberty (selected), AI Prediction, Resources, and Contact. A user profile card for 'Ploy Wongsu' is displayed, showing 'Girl', '9 Years, 4 Months', and 'Born May 10, 2017'. Below this is the 'Puberty Screening' section, which includes a disclaimer: 'A guided screening tool, not a clinical diagnosis. Talk to a pediatrician for a formal assessment.' The main form is titled 'Everyday changes' and contains three questions with 'Yes', 'No', and 'Not sure' options: 1. 'Have they been growing noticeably faster recently?' (Subtext: Suddenly getting taller much faster than in previous years.) 2. 'Are they outgrowing clothes or shoes unusually fast?' (Subtext: Needing the next shoe size or a new uniform much sooner than before.) 3. 'Has their body odour changed?' (Subtext: Adult-type body odour, or needing to wash or use deodorant when they did not before.) A 'Cancel' button is located at the top right of the form.

Choose **See result**. GrowTH explains what the answers suggest for your child's age and what to do next, for example whether to talk to a doctor and when to check again.

Puberty Screening

A guided screening tool, not a clinical diagnosis. Talk to a pediatrician for a formal assessment.

✔️

Screening result · Oct 2, 2026

No signs of puberty yet

No signs of pubertal development reported. At 9.4 years, that is expected.

- Nothing to do right now. Puberty has not started, which is normal at this age.
- Worth checking again if you notice any of the signs in this questionnaire, or by around age 13 if nothing has changed.
- Keep recording height so the growth chart is ready when the spurt does begin.

A screening aid, not a diagnosis. Talk to a doctor if anything worries you.

Screen again

Past screenings are listed under **History**, with a follow-up plan when one is needed.

If a caretaker fills it in, they do not see the result. You (and the child's doctor) get a notification, and the result appears here for you.

6. Invite a caretaker or your child's doctor

Choose the **people** button (two figures) on your child's card. A window shows who follows your child and any invitations still waiting.

Invite someone to follow Ploy Wongsa

 **Caretaker**

 **Doctor**

A caretaker can record growth and fill in the puberty questionnaire. They do not see screening results; you and the doctor are notified instead.

Email (optional)

Cancel

Create invitation

You get a **QR code** they can scan with their phone camera, and a **Copy link** button.

Invite someone to follow Ploy Wongsa

Ask them to scan this with their phone camera. We couldn't email nanny.example@gmail.com; share the link instead.

Works once · expires Oct 9, 2026

 **Copy link**

Invite someone else

Done

- Each invitation **works once** and **expires after 7 days**.
- You cannot invite your own email address, or someone who already follows the child.
- Inviting the same address again replaces the waiting invitation.
- To cancel an invitation that has not been used, choose the **x** next to it.
- To stop someone following your child, choose **Remove** next to their name. It takes effect immediately.

What each person can do

See the child's profile and growth	✓	✓	✓
Add growth measurements	✓	✓	✓
Fill in the puberty questionnaire	✓	✓	✓
See puberty results	✓	–	✓
See the hospital number	✓	–	✓
Add hand X-rays, see the AI estimate	–	–	✓
See the doctor's bone-age reading	✓	✓	✓
Edit the profile, invite and remove people	✓	–	–

A doctor needs a doctor account that GrowTH has approved before they can accept.

7. Bone age

Bone age shows how mature a child's bones are, from an X-ray of the left hand and wrist. It can help a doctor understand growth or the timing of puberty.

In GrowTH, **only your child's doctor adds X-rays**. An AI model gives the doctor an estimate, the doctor checks it, and then records their reading. **You see the doctor's reading, not the AI estimate:** the date of the X-ray, *Normal for age*, *Advanced for age* or *Delayed for age*, and the doctor's note.

Choose a notification to open the right page for the right child. Choose the ✕ to dismiss it. Important notices are also sent by email.

9. Your account and settings

Open the menu under your initial (top right).

- **Profile:** your name and phone number, and **Delete account**.
- **Settings:** your profile photo and your password.

Settings

Profile photo

Change password

At least 8 characters, with a letter and a number

- **Change password:** enter the current one and a new one. Your other devices are signed out.
- **Add a password:** shown instead if you signed up with Google. After that you can sign in either way.
- **Report a problem** (also in this menu): tell the GrowTH team what went wrong. The page you were on is sent with it.
- **Dark mode:** the moon button in the top bar.

Deleting your account removes your login and photo. Any child for whom you are the only parent is deleted too, with all their records and X-ray images. This cannot be undone.

10. Privacy: who sees what

- Your child's records are seen only by you and the people you invite, as in the table in [section 6](#).
- X-ray images are never public. Only your child's doctor can open them.
- GrowTH administrators approve doctors and answer messages; they do not see children's records. For research and statistics they can export figures with names, contact details, hospital numbers and exact dates removed.
- The full privacy notice is linked at the bottom of every page and on the sign-up page.

11. For caretakers

1. Open the invitation link or scan the QR code the parent gives you.
2. Log in, or create an account (choose **Parent or caretaker**), and choose **Accept invitation**.
3. The child appears on your dashboard, grouped under the parent's name if you help more than one family. Switch children with the **switch** button.

You can add growth measurements and fill in the puberty questionnaire. You will see *Submitted* instead of the result: the parent and the doctor are notified and read it. You do not see the hospital number or X-rays, and you can leave a child at any time from the switch window (**Manage**).

12. For doctors

1. **Register as a doctor:** choose **Doctor** and enter your medical licence number and hospital or clinic. Confirm your email address. A GrowTH administrator checks your licence and approves your account; you are notified when that happens.
2. **Accept the parent's invitation** (link, QR code or email). The child appears on your dashboard. To find a patient quickly, use the search in the switch window: it finds your own patients by **hospital number (HN)** or name.
3. **Add a hand X-ray:** go to **AI Prediction**, set the **exam date** (the child's age is taken on that date), and drop or choose the file. A **PDF report, JPEG, PNG or WebP** is accepted. GrowTH proposes a crop around the film (removing page margins, text or the light box); adjust it if needed, keeping the whole film, and choose **Upload and analyse**.

 Exam date 10/02/2026
 The child's age is taken on this date, the same way as growth measurements, so the gap compares like with like.

Drop the X-ray here or click to choose
 Left hand and wrist · PDF, JPEG, PNG or WebP · you can crop before upload

History
 Exam Sep 25, 2026 Reviewed: Normal for age

- 4. Read the result.** You see the AI bone age, the child's real age on the exam day, the gap, and the model's typical error (about 7 months; about 1 estimate in 5 is out by more than a year). A gap of 2 years or more is suggested as Advanced or Delayed; a gap over 3 years is flagged so you can check the image and dates.
- 5. Record your reading:** Normal, Advanced or Delayed, an optional note for the family, and **Save and share with family**. Only your reading is shared, never the AI number. You can edit it later, and delete an X-ray.

You can also set or correct the child's hospital number with the **pencil** on the child's card.

13. Help and common questions

I did not receive the confirmation or invitation email. Check your spam or junk folder. Emails come from `noreply@mail.hacklgroups.com`. In GrowTH, the yellow banner has **Send the link again**. For invitations, the parent can also share the QR code or link directly.

The invitation says it has expired or was already used. Each invitation works once, for 7 days. Ask the parent to create a new one.

I am a doctor and cannot accept the invitation. Your doctor account must be approved first, and your email confirmed. Wait for the approval notice, then open the link again (it still works until it expires).

The site is slow the first time I open it. The server sleeps when nobody uses it and takes up to a minute to wake. After that it is quick.

I chose the wrong sex or date of birth. Correct it with the **pencil** on the child's card. The charts update at once.

Something looks wrong. Use **Report a problem** in the menu, or the **Contact** page.
